

Module BITlogon (Bit Logon Scripting Services)

- providing automated startup sequences, corresponding to the BitScriptExtension
- customization and standardization of Windows desktop- and explorer appearance on any workstation within the company network (corporate design)
- sensible renaming / labeling of mapped network drives, removing the need for end-users to deal with complex physical file- and directory structures held on the server(s)
- intelligent mapping of additional network resources, such as printers and logical volumes, according to individual users' rights and privileges
- seamless integration of additional featured modules or user-specific logon-command sequences
- easy centralized administration of users and their individual rights to files and directories
